

## Introduction:

PyQuiz is a custom multiple-choice quiz application built on the Tkinter framework. There will be 4 choices for each answer and the user must select the correct answer. User will also be able to edit the questions through a text editor that is built into the application.

## GitHub repository:

<https://github.com/ffirm/PyQuiz>

## Main features:

- Quiz
- Text editor

## Description:

User will be greeted at the main page where there will be 2 buttons. "Start" will begins the quiz. The quiz is made of several multiple-choice questions and the user must answer the correct one. After the last question, the result of the quiz will pop up, user will be able to view it and when the user is done, he/she can return to the main menu with a button click.

The "Edit" button will create a new window which is a text editor to the questions.txt file. User will be able to add, delete and edit the questions following the guideline that is inside the file.
